Colors of the site

- Main color will fill items of the site, for example navbar and grid items. Color is sand-like but light enough so it doesn't hide text inside of it which is colored by black
- Background- color will be light and calm, maybe some neutral/slightly warm white shade
- Filler colors should bring neutral and natural-like feeling. In this point I think shades which bring natural and fresh feeling to viewer. For example different shades of green, brown and white. Red was suggested for effect color. It might be useable in some details maybe...
- Last I will add color world which was my initial idea of implementation
- Fonts will be neutral and readable. Only "Yrityksen nimi" and some possible effect- text will have own special calligraphy.

The initial idea of the colors which I like to have:
